

As part of the utility construction, there will be boring under the culverts at Lorence Creek.

Boring requires the contractors to open large pits in the roadway and, as such, both contractors will be implementing the above detour [shown on map]

This will close Donella Drive to through traffic between Lorence Creek and William Classen to minimize risk to both drivers and construction workers.

Local traffic for residents will be allowed, so home owners will have continual access to their property. The closure will be in effect 24 hours a day until boring activities are complete.
